TRAINING OPPORTUNITY

Superior Concealment Detection

"An unprecedented approach to identification and exploitation of Hidden Compartments"

Course Description:

This dynamic TWO-DAY course, serving as a continuation of the "Smugglers, Inc. Optimum Interdiction Techniques" course, delivers an in-depth look into the various concealment methods used by contraband smugglers. Action packed with hundreds of photographic and video examples of actual hidden compartments, this course exposes tactics used to detect the most elaborate and comprehensive unconventional hidden compartments in passenger vehicles. The ever changing trends of smuggling, affects law enforcement's ability to stay ahead of the game. Developed based on the actual firsthand experience of the course developers and instructors, this course allows the attendees to become familiar with the most recent methods of concealments and unconventional modifications present in various vehicles. The instructors use their personal knowledge of how to detect various concealments and deliver the techniques in a classroom setting, demonstrating the simplicities of the detection methods by showing the commonalities based on physical, visual, and audible detection of anomalies in various situations. Instructors will show the step-by-step methods used to build compartments in vehicle, which will assist in the attendees ability to understand how the concealments are constructed and how they can be identified. Instructors will demonstrate the proper deployment of tools commonly used during the least intrusive search methods; including advanced tools such as the Contraband Team Inspection Kit by CSECO. Video and photographic examples of searches along with an in-depth detection analysis of concealments will enable the attendee to have the roadside experience similar to doing a ride-a-long. Attendees will be exposed to detection strategies used prior to contact and during encounters; all while adhering to federal, state and local laws/policies. Presenters will apply the professional standard of policing along with civil liability concerns and how their relevance applies to searches. The presenters will familiarize the students with rapid assessment techniques to help minimize search time by giving the ability to quickly identify signs of suspicious vehicle components. Line comparisons are relayed to assist in determining what is normal and what is an anomaly with each compartment and its location. The hierarchy of smuggling organizations will be discussed, allowing the understanding of how it pertains to the level of complication for the concealment, relative to origin and destination of the contraband. The course will REGIONALIZE concealment priorities based on local trends seen in the specific course location. The REGIONALIZATION approach will allow presenters to focus on common concealments seen within a specific geographical area of the United States, thus giving the attendee a better understanding of the specific trends commonly encountered concealments in their respective area of operation.

ABOUT THE BOOK:

From hardcore criminals concealing major crimes to your children hiding their homework, members of Triple I Solutions (GCSTC, LLC.) teach you a simplified method of reading deception in your everyday lives. Through years of use in law enforcement and special operations, the Evading Honesty® system has proven over and over again to be an effective tool that benefits both law enforcement and the average citizen alike. It's time you know your surroundings, who you can trust, and those who are Evading Honesty®!
